PREFACE

The 1986-87 "Student Charges Report" is a joint project of the American Association of State Colleges and Universities (AASCU) and the National Association of State Universities and Land-Grant Colleges (NASULGC). These organizations represent 90 percent of the nation's publicly assisted, four-year institutions of higher education.

AASCU and NASULGC first collaborated on this report last year to give higher education consumers easy access to up-to-date, accurate, and complete information about cost trends for tuition, fees, room, and board at their member campuses.

The 372 AASCU-member institutions enroll 2.5 million students. Currently, 60 percent of AASCU institutions are comprehensive universities; 29 percent are general baccalaureate institutions with primary emphasis on undergraduate education; and 5 percent are doctorate-level institutions. AASCU members grant more than 300,000 bachelor's degrees annually--approximately 32 percent of the nation's total--about 27 percent of the master's degrees awarded each year, and 7 percent of the doctoral degrees.

NASULGC, the nation's oldest higher education association, represents 149 major research universities. NASULGC-member campuses enrolled about 2.2 million students at the start of the 1985-86 school year. Among these institutions are twenty-four of the largest colleges, universities, and multicampus systems of higher education in the country. NASULGC members award nearly half of all higher education degrees in the United States, including about 60 percent of all doctorates.

Charges assessed students attending public colleges and universities are held--as a matter of general policy--as low as possible to encourage wide access to quality higher education. When in-state undergraduates registered for class this fall, they found that, on the average, student charges--tuition, fees, room, and board costs--had climbed 6.2 percent as compared with the double-digit increases of just a few years ago. But as campus administrators work to stretch dollars they must also be ever vigilant that their efforts in no way compromise the quality of the instruction, research, and public service programs carried out by campuses.

College officials are often asked by parents, students, government officials, the news media, and others why higher education costs have outstripped inflation as measured by the Consumer Price Index. The answers often cited include: the need for faculty salaries to recoup previous losses to inflation and remain competitive with private industry; the need to invest in costly scientific and technical equipment--world-class equipment designed to improve the quality of instruction and research; the need to repair aging laboratories and other buildings; the need to invest in students--to provide access and opportunity to talented individuals regardless of their financial means--by expanding student financial aid programs; and the need to purchase large quantities of food, energy, and other commodities and services that are particularly inflation sensitive.

While these realities of higher education economics tell a good part of the story, AASCU and NASULGC believed that it was necessary to collect more detailed and current information from our membership in an effort to further explain the economic dilemma campuses find themselves in—a dilemma that finds colleges and universities coping with demands for more and higher quality educational, research, and public service programs at the same time that government funding has been cut and costs have climbed.

Consequently, as part of this year's "Student Charges Report" we have asked our membership to pinpoint exactly what items are driving up their costs, what actions they have taken to ease the burden of educational costs on consumers, and what new sources of income they have tapped to help offset government funding cutbacks. We have also asked our membership to detail as precisely as possible the contribution of tuition and fees to covering the costs of instruction.

In addition to documenting recent trends in student charges, this year's report contains various appendices outlining cost information for specific colleges and universities in several categories: undergraduate student charges; graduate student tuition and fees; and tuition and fees for students in the professional schools of law, medicine, veterinary medicine, and dentistry.

Both associations hope this report will be useful to consumers of higher education, the public, the college and university community, and others in understanding an important part of higher education economics.

FINDINGS

Tuition, fee, room, and board expenses climbed an average 6.2 percent in the fall of 1986 for in-state, undergraduate students attending more than 500 campuses holding membership in the American Association of State Colleges and Universities (AASCU) and the National Association of State Universities and Land-Grant Colleges (NASULGC).

Tuition and fees for in-state undergraduates averaged $1,346 in the fall of 1986--a 7.3-percent increase, compared with $1,254 the previous year.

Average room and board charges were $2,446 in the fall of 1986--a 5.7-percent increase over the $2,315 average for 1985.

Consequently, undergraduate students enrolling in public colleges or universities located in their state of residence faced an average of $3,792 in tuition, fee, room, and board costs in the fall of 1986, compared with $3,569 in 1985.

The 1986 survey of student charges is a cooperative effort carried out by AASCU and NASULGC. The two association memberships--372 AASCU and 149 NASULGC campuses--represent 90 percent of publicly assisted, four-year institutions of higher education in the United States.

Tuition and fees for in-state undergraduates at AASCU campuses posted a 7.6-percent average increase, climbing to $1,282 in the fall of 1986, compared with $1,191 in the fall 1985 survey. NASULGC-member colleges and universities registered a 7.5-percent hike, bringing tuition and fee charges for in-state undergraduates to $1,524 this fall, compared with $1,418 in the previous canvass.

Tuition and fees for nonresident, undergraduate students climbed to an average $3,516 in the fall of 1986, a 6.7-percent boost from the fall 1985 tally of $3,294. When room and board costs are factored into the higher education cost equation, these students faced an average of $5,962 in expenses.

Tuition and fees for in-state, graduate students were $1,495 on the average in the fall of 1986, a 7.4-percent increase from $1,392 in 1985. Nonresident graduate students faced $3,549 in tuition and fees on the average in the fall of 1986--a 7.1-percent hike, compared with $3,315 in the previous reporting period.

Average tuition and fees for in-state, first professional students in the fall of 1986 were: law, $2,097 (10.4-percent increase); medicine, $4,633 (7.5-percent increase); veterinary medicine, $3,145 (a 9.1-percent increase); and dentistry, $4,351 (6.3-percent increase).

EDITOR'S NOTE: Three private colleges and universities, members of NASULGC, were not calculated in the figures presented in Tables I-V because of the wide disparity of their tuition and fees compared to other NASULGC members.

HIGHER EDUCATION ECONOMIC TRENDS: CONSUMERS & INSTITUTIONS

Coping with the Higher Costs of Higher Education

The Digest of Education Statistics 1985-86, published by the U.S. Department of Education, reports that "while college tuition, room, and board charges have risen substantially in the past decade, only in the last five years have they exceeded the rate of inflation" as measured by the Consumer Price Index (CPI).

The Digest also observes that "since 1975-76, college costs have risen 118 percent at public institutions and 141 percent at private colleges, compared to an increase in inflation of 97 percent."

Economists, higher education officials, and others have offered wide-ranging explanations for the continuing surge in the price tag for higher education.

Economist Carol Frances has pinpointed salary increases, replacement of outdated and obsolete equipment, capital investments, and student aid as four key factors in driving up the cost of higher education.

Cathy Henderson, in a paper published last year by the American Council on Education (ACE), credited economy-wide inflation as a culprit, noting that as inflation has decreased so has the growth rate of student charges. But Henderson also forecasted that mounting demands for excellence in education will lead to a spurt in the cost of instruction.

And Kent Halstead, of Research Associates of Washington, projects that a 44.5-percent increase in 1982 higher education revenues will be needed to meet the costs of goods and services purchased by colleges and universities in 1990.

Consequently, public institutions of higher education find themselves grappling with a series of complex and, at times, contradictory situations: increased public demand for "quality in the classroom," the lingering effects of the era of double-digit inflation, uncertainty over federal funding levels, diminished state-tax appropriations as a percentage of current fund revenues, and calls by governors and state legislators for cost-containment programs.

Under these economic circumstances, campuses have taken several steps to cut costs, ease the financial burden shouldered by consumers of higher education, and develop new funding sources. As part of the 1986-87 student charges survey, AASCU and NASULGC polled member institutions to try to pinpoint how campuses are coping with increased higher education costs from the institutional and consumer standpoints.

Helping Consumers Cope with the Cost of Higher Education

AASCU and NASULGC-member campuses are becoming more consumer sensitive.

These colleges and universities are increasingly adopting policies and practices aimed at making it easier for consumers to pay for higher education services. Among marketing strategies are various tuition options; credit card, advanced payment, and installment payment programs; and multiple meal plans for students living on campus.

Tuition and Fee Options

The typical student charges shown in this report do not reflect the growing number of tuition options available to students.

Twenty-five percent of the institutions responding to the 1986-87 student charges survey described alternatives designed to reduce tuition costs for targeted student populations. Almost half of these reported that the common element in these options was **tuition reductions in out-of-state charges for students in special populations.**

The special populations benefitting from these reductions include graduate students (California), Pacific/Asian students (Hawaii), and out-of-state veterans (Pennsylvania). Other students who are **state residents** stand to benefit also. For example, at the University of Southern Maine, reduced or

free tuition is available for Native Americans, senior citizens, and dependents of deceased veterans. At the New Jersey Institute of Technology, local residents may enroll in certain mathematics courses with no tuition charge. In the University of California System, children of local fire fighters or police officers killed while on active duty are eligible for free tuition.

Twenty-four percent of tuition reduction plans deal with reciprocity agreements with contiguous states. A number of institutions in Georgia/Tennessee, Kentucky/Mississippi, Oregon/Washington, and South Dakota/Minnesota reported these agreements. Reciprocity agreements generally affect the rate at which nonresidents from either state are charged tuition and fees at the institution in the state of their choice. In some states the state legislature assures a certain number of places at the in-state rate for its students planning to attend public colleges and universities in another state. In other states, the tuition and fee charges are determined by a formula that results in a reduction of the out-of-state costs.

Whether the tuition reduction is a result of the special category of the student or a reciprocal agreement, it represents a considerable savings for students. The nonresident charges at public colleges and universities can be three to four times as much as the resident tuition charges.

Twelve percent of special programs to help parents with costs include tuition waivers and fee reductions for employees and faculty and their dependents.

Payment Options

Public colleges and universities are increasingly aware of the need for administrative practices that make it easier for parents and students to cope with paying bills for higher education.

Fifty-five percent of survey respondents indicated such practices, including the use of credit cards to charge tuition, fee, and other costs when students register for class, as well as instituting advance-payment and installment-payment programs.

Credit cards, the most common "payment option," are used at a 35-percent rate. Some institutions specified that credit cards were acceptable for use by graduate students or students enrolling in continuing education classes only. Others reported a general student use was permitted.

Installment plans are in place at 33 percent of these institutions with special payment programs.

Advance-payment plans were used at a rate of 4.6 percent. This practice helps ease the payment burden of the students by permitting partial remittance of tuition and fees during early registration. Institutions in Georgia, Florida, and the District of Columbia, among others, reported such plans.

Another kind of advanced-payment proposal is being considered in a number of states, for example, Michigan, but is not yet practiced. In general, these plans call for parents to put in trust at the birth of their child a specified sum of money designated for tuition and fees. With systematic deposits--for example, monthly payroll deductions are being suggested--the trust would contain enough money to ensure tuition and fees would be covered when the child is ready to attend that state's public colleges and universities.

Most institutions consider special circumstances of students who cannot meet their tuition bills on an as-need basis, for example, the student who is awaiting the arrival of financial aid. About 6.4 percent of institutions with special payment programs offer deferred-tuition plans and short-term student loans to help consumers meet educational costs, including the University of Idaho, the University of South Florida, and colleges in Oregon and Pennsylvania.

Meal-Plan Options

At public colleges and universities the traditional three-meals-a-day, five-days-a-week board plan is evolving, as the student demography and life style changes.

Institutions are commonly offering students point systems or diner's card accounts. These systems require students to budget a predeposited amount of money or points for meals, balancing more expensive meals with lighter fare. As students eat budgeted meals, an appropriate amount of money is deducted from their account. These "declining balance" plans offer benefits to the student and to the institution.

The student pays about the same overall as would be paid in a traditional compulsory dining plan. The benefit is that in missing a meal, the student does not forfeit any of the "food money." It is still there for days when more food or more costly food comsumption is planned.

The advantage to the institution is two-fold. Waste is reduced, as students take only what they plan to eat, not all they are expected to have, which is too often thrown away. Also, the food service has more flexibility in offering costly or "specialty" foods, since it is not locked into a fixed expense.

Some campuses have closed cafeterias and replaced them with shopping mall-like "eateries," where students have a wide-range of food options. The University of Mississippi is one example. The appeal of this environment to students goes right to the heart of the American public's enjoyment of seeing a variety of fast-food choices linked together offering unlimited selection.

While most institutions are requiring students who live on campus to eat meals at the on-campus cafeteria, they offer students various meal options in terms of the number of meals planned to be consumed per week. Also, students living off-campus have options to eat at campus facilities. Considering the number of students commuting for part-time and graduate studies and the number who choose to live off-campus, this is a popular alternative.

College Costs: The Institutional Standpoint

Tuition and fees are one part of the cost/contribution equation for public colleges and universities. U.S. Department of Education data show that from 1979-1983, the income derived from tuition as a percent of current fund revenues increased at four-year public colleges and universities:

- From 12.3 percent to 14 percent at doctoral institutions
- From 15.3 percent to 19.3 percent at comprehensive institutions
- From 17.7 percent to 21 percent at baccalaureate institutions.

These figures coincide with student charges increases, ranging from 6 percent to 17 percent during those fiscal years at public colleges and universities. However, student charges have been increasing at consistently lower rates since the beginning of this decade.

At the same time, state legislatures are looking for an increasing contribution to educational costs to be made by tuition and fees. The income from tuition and fees is generally returned to the state general fund. A percentage of this income is then provided to publicly assisted institutions for their general operating budgets. In a few states, Colorado and Hawaii for example, institutions reported that the tuition and fees earned from resident and nonresident students is "spent" differently. The contribution to educational costs from state resident charges is less, presumably because the state is assisting in these costs with appropriations from state taxes. At the same time, a larger proportion of tuition revenue obtained from nonresident fees is applied to educational costs for these students.

The latest report comparing state financing of public higher education from Research Associates of Washington, a higher education consulting firm, indicates that students and their families contribute less than one-third to the cost of instruction at public institutions.

Respondents to the AASCU-NASULGC student charges survey indicated these relationships between tuition and fees and instructional costs:

- A slight majority of those estimating this contribution placed it in the range of up to or about 25 percent of the cost of instruction.
- 32 percent reported that tuition and fees make up one-third of the cost of instruction.
- 9.5 percent said tuition and fees represent one-half of the cost of instruction.

More than 90 percent of the the survey respondents say income from tuition and fee increases is applied to the general operating budgets of their institutions. In others, for example, California, the income is designated for a single cost item, such as scholarships.

Another part of the cost/contribution equation is the revenue realized from state tax appropriations for public colleges and universities. For

fiscal 1979-83, state appropriations as a percent of all current fund revenues decreased for all categories of four-year, public colleges and universities (HEGIS Finance Survey data, both published and unpublished tabulations):

- o From 41.4 percent to 38.8 percent at doctoral institutions
- o From 53.1 percent to 52.1 percent at comprehensive institutions
- o From 50.9 percent to 49.7 percent at baccalaureate institutions.

The two-year gains reported in the Grapevine publications (Center for Higher Education, Illinois State University) of state appropriations since 1983 have indicated the increased attention given to public education by a number of state governors. However, the worsening economic conditions in a number of states, such as Texas and Louisiana, and the cost containment concerns in others have resulted in an overall slowdown of these gains.

It is important to note though, that even with consistent increases in student charges, The College Board's 1986 tuition report stated most college students will face slightly lower increases this year because they are enrolling in public colleges and universities where the rate of increase is less than at private institutions.

Traditional Versus New Sources of Financial Support

Forty-two percent of institutions responding to the 1986 AASCU-NASULGC survey have found new sources of financial support to supplement traditional resources earmarked to cover instructional costs. Thirty-four percent of this group have found multiple sources of new financial assistance.

Private donations from foundations, individuals, and alumni are the institutions' most popular choice of funds for additional support. Partnerships with business are the next most favored source of supplemental funding. Federal grants are identified as a third source of financial support. The California State University system pinpointed an unusual higher education funding source that could be described as "community support": lottery revenues.

Recent findings by the New York-based Council for Financial Aid to Education (CFAE) support the evidence that public institutions are receiving more voluntary contributions.

CFAE noted: "Efforts of the public institutions were particularly successful in 1984-85, with most categories of institutions reporting increases of 15 percent or better in the average funds raised per institution. The comprehensive public colleges recorded a 43.1 percent rise in average institutional support. In all groups but one the private colleges showed smaller increases than did their public counterparts."

Public doctoral institutions, however, gained thirteen times as much from corporate support as did public comprehensive institutions. But the two-year gain from 1983-85 in corporate support for public comprehensive campuses was 57.8 percent.

Financial Pressure Points

Sixty-one percent of public, four-year institutions report that their governors or state legislatures have discussed or recommended cost containment during the past two fiscal years.

At the same time, 65 percent of survey respondents reported facing new categories of costs:

- 42 percent of these new categories were related to the purchase of new computer hardware and software.
- 9 percent was designated as equipment purchases.
- 8 percent was earmarked for telephone upgrades and telecommunications.
- 15 percent of new cost categories dealt with computer upgrades, maintenance, and support.

New cost categories, however, were not necessarily the most expensive for public colleges and universities. Eighty-four percent of survey respondents reported on institutional budget items that had increased the most in the past two years, including faculty salaries, computer purchases, insurance, utilities, equipment purchases, and employee benefits.

Insurance, computer acquisitions, and faculty salaries were the top three items fueling expense increases for public colleges and universities, according to survey respondents. Campuses reported cost increases for insurance, the highest expense, ranging from 90 percent to more than 100 percent. Computer acquisition cost increases varied the most, ranging from 20 percent and 25 percent to more than 100 percent.

Faculty salaries have been noted consistently as the source of cost increases and the repository of tuition increases in the current analyses of college finances. According to Bowen and Schuster's analysis, in their recent book American Professors, academic salaries - both real and relative - fell between 1970-1984, regardless of the increases reported by various institutions. About three-fourths of the respondents in the AASCU-NASULGC survey providing this cost increase information said faculty salary increases did not exceed 15 percent. Another 25 percent of the increases remained between 16 and 35 percent.

DATA COLLECTION AND REPORTING DIVERSITY

The AASCU-NASULGC annual "Student Charges Survey" was mailed to nearly 500 institutional members of the two associations. In addition, some nonmember public four-year campuses that frequently participate in the survey programs of the two associations also submitted data. While 90 percent of the figures reported were obtained from the institutions themselves, some system offices responsible for student charges information responded for all members of that system.

The questionnaire requested typical annual charges for tuition, mandatory fees, and room/board assessments for full-time students at these colleges and universities. A separate section allowed for the collection of charges for first professional academic programs: law, medicine, dentistry, and veterinary medicine.

Survey forms contained 1985 charges submitted by each institution and requested corrections to maintain year-to-year consistency and comparison. Telephone calls were used to correct errors and raise questions.

The institutions analyzed in this report are state assisted. The charges assessed students attending these colleges and universities are monitored and set by governing bodies within each state.

This report does not compare student charges by states or rank institutions. The diversity in reporting charges--resulting from differences in campus missions and reporting conventions--is often great, making comparisons difficult and misleading.

For the most part, there should be consistency of student charges across institutions in the same state and the data-editing process for this report aimed at discovering that consistency. This in-state consistency was important in computing the average overall charges and the percentage change between years for institutions reporting for two consecutive years.

However, a hallmark of state colleges and universities is their diversity of missions--and this is reflected in their student charges. An institution, for example, chiefly providing opportunity for students to earn degrees while external to the campus will charge lower rates than those at more traditional four-year undergraduate campuses. Similarly, specialized institutions, where students undertake technical training in engineering or mining, will be more costly than liberal arts institutions.

The AASCU-NASULGC survey found that about 5.7 percent of public, four-year institutions assess charges at different rates for undergraduate majors. The most common disciplines treated this way are: engineering, allied health and nursing, business, and computer science. Most extra charges are assessed on a semester basis.

Institutions also follow particular reporting conventions in providing student charges figures. Survey respondents were asked for typical annual charges assessed of full-time students. Some institutions reported the annual figure based on the number of credit hours taken each year to graduate in four years. Others reported the credit hour base to be the typical load for their undergraduate students, usually 12 hours or 15 hours a semester. Graduate

student charges were based, for most institutions, on a reduced number of hours because graduate students are primarily attending on a part-time basis. An exception to be noted are the graduate student figures from the institutions in the California State University system, which are reported at the full-time rate.

A final variation should be noted in mandatory fees. Some states define a range for particular fees and institutions have some authority over actual amounts assessed. This can make some overall figures in the same system of institutions look lower than others. In the same way, some institutions are authorized to drop or lower fees, making their overall charges look as if they have decreased from year to year, when the tuition increase is in fact consistent across the system members.

There were some institutions where decreases did occur according to the reported figures. For more information on the reasons, such as decreases in nonresident charges, it is best to contact the institutions themselves.

APPENDICES

Notes on Contents of Appendices

There are five sets of appendices for this report, containing data for all institutions that responded to the 1986 Survey of Student Charges. The first two sets contain data on undergraduate and graduate annual charges at AASCU and AASCU-type institutions. The second two contain similar information for NASULGC and NASULGC-type institutions, and the last set contains a combined listing for the two associations of first professional charges.

Appendices A-D list the typical annual charges for tuition (fees included) in both 1985 and 1986. These charges have been calculated to represent the annual cost in tuition and fees for a **full-time** student.

Annual room and board expenses for 1986 are also shown in Appendices A and C. Since room and board plans often vary so much, these charges represent the most typical cost for a student living and/or eating on campus. Cases in which the room charge is the only figure listed indicate that only housing with no board plan is offered by that institution. It is also possible that the board plan is an optional point system and the school did not provide the annual charge. Likewise, a listing of only a board charge indicates that board is available, but housing is not. Institutions showing only a combined charge are those that offer room and board only as a combined package. Listing of all three charges (room, board, and combined) indicates that room and board are available as separate options. No listing of room and board charges indicates that room and board is not available at that particular institution.

Blank spaces in the appendices generally indicate data was not available for that category or year. However, in the case of Puerto Rico, nonresident tuition and fees are based on the student's state of residency and are therefore not detailed here.

Asterisks (*) in Appendices A-E note a special category of institution: those not presently members of either association. In collecting data from some system offices, the student charges information was obtained for these institutions also. Some of these systems are members of either AASCU or NASULGC.
